# Making Work Easier

## EasyInvoice better work experience.

- **Easy Purpose**

Easy Solutions have decided to take one step further on making employer's work experience better, we have decided to create an Adobe Air Based Application, where our clients will have the benefit of quickly completing a task that most softwares out there, decided to overload the application. This application will only be used for Invoices, and the users will be able to; save PDF, e-mail PDF, and save an HTML based Invoice.

- **A.P.I.**

For our API "Application Programming Interface". The PDFCrowed API. This API will be used to transfer a HTML document into PDF, the reason being is that. Adobe Flash Builder does not export a project to PDF, but we can make it so it creates an HTML document, and from that we will be able to convert the HTML document into a PDF document, where our clients will be able to e-mail, save, print, the document.

- **Demographics**

EasyInvoice will be aiming for those small business owners who wish technology could be easier to use, we all know that time is money. EasyInvoice is the solution for your problems, by using our software you will be able to quickly complete a task that before, your old application required you to download a template, or create a template for your company. The best thing about EasyInvoice is that any one can use, it is 100% user friendly and no need to read a book to understand how it functions.

- **Platform**

EasyInvoice will be developed using Adobe Air, where we are allowed to launch the application directly through our desktop, allowing us quickly manage, sort, delete, add items to the Invoice. The application will be light, and the installation is quick. There is no need to signup, pay... Our software will be supported on both, windows PC, and Mac computers, giving all of our users 100% Satisfaction.

### • Future Features

For this project we are planning on implementing some nice features that will again improve the way our client achieve their task, and how quickly they can accomplish it. One of the key features that we were planning on implementing on the application is the following;

**“Easy Share”** - which will be using facebook, twitter, API where the users will be able to quickly share their invoice with their friends on facebook, and twitter. Easy Solutions knows how big social networking has become part of our lives, and we know that sometimes sharing is quicker than e-mailing a PDF. Using the ‘Easy Share’ our clients will have the benefit of quickly sending a link to their friend or to a particular friend to visit that link, where they will be able to look at the invoice, print, and save it.

**“Easy Templates”** - by providing our clients with pre-made templates, so they can give a more personal look to their invoice will give our clients a better user experience and a more professional look to their invoice.

**“Easy Edit”** - by giving the user a way so that they can have a quick access to that invoice will help them complete the task while at work or on-the-go. “Easy Edit” will allow our users to edit a current pending Invoice on their mobile device, or on a different computer by simply installing the mobile application or installing the application on the computer which they will be working on. We are also planning on implementing a web based version, so that user’s with no access of admin privilege can also use our app by simply logging onto our web based application.

### • Copyright

Easy Solutions is not responsible for any information inputted by the users. Our application is free, and Open source allowing users to download our application, improving, and re-utilizing it. If you do decide to take advantage of our Open Source code, you may not at any time sell it or make any profit from our base code. This application was developed for educational use, and all the graphics, and code was developed by the “Easy Solution” team members. If you wish to contact any of our team members you may wish so. All of the design and Code is owned by “Easy Solution”.
